TOXIC CHEMICAL RELEASE INVENTORY GLOSSARY OF SYNONYMS

Introduction

This glossary contains chemical names and synonyms for substances covered by the reporting requirements of section 313 of the Emergency Planning and Community Right-to-Know Act (EPCRA) (Title III of the Superfund Amendments and Reauthorization Act (SARA)) (40 CFR Part 372). The glossary was developed to aid in determining whether a facility manufactures, processes, or otherwise uses a chemical subject to section 313 reporting for the Toxic Chemical Release Inventory (TRI).

The glossary is divided into two parts. Part I is a listing in Chemical Abstracts Service (CAS) registry number order. The CAS number is followed by the name by which the chemical is listed under section 313. Chemicals should be reported to TRI by their listing names. Each CAS number and associated listing name is followed by synonyms in alphabetical order.

Part II of the glossary is an alphabetical list of chemical names and synonyms, with CAS numbers. In this list, section 313 names are followed by an asterisk (*) and are footnoted as listing names.

On November 30, 1994 (59 FR 61432), EPA added 286 new chemicals and chemical categories to the section 313 list. Reporting of these new chemicals is required beginning with the 1995 reporting year (first reports submitted on or before July 1, 1996). Exhibit 1 lists the 282 specific chemicals with CAS numbers added to section 313. The specific chemicals in Exhibit 1 include 20 chemicals listed as members of the diisocyanate category and 19 chemicals listed as members of the polycyclic aromatic compounds (PAC) category. Reports for the chemicals belonging to these categories should be for the category, not the individual chemical. These two categories and the specific chemicals in each are shown at the end of Exhibit 1. The specific chemicals belonging to each of these categories, and their synonyms, are included in Parts I and II of this glossary. The categories to which they belong are identified in footnotes. The symbol "+" identifies diisocyanates, and the symbol "#" identifies PACs. New chemicals that are individually listed are also footnoted, using the symbol "%."

One chemical noted as belonging to the diisocyanate category, methylenebis(phenylisocyanate) (MDI), CAS number 101-68-8, is reportable through reporting year 1994 as an individual chemical. Beginning in reporting year 1995, it will be reportable as part of the diisocyanate category.

Although specific chemicals listed as diisocyanates and PACs are included in the glossary, chemical categories that are listed under section 313 are not included. EPA did not attempt to identify synonyms associated with chemical categories, other than the specifically listed diisocyanates and PACs, because each category potentially includes many chemicals.

This glossary can be used to match the trade and common names of a substance to the CAS number, the EPCRA section 313 listing name, and other synonyms. The trade or common name can be looked up in Part II, the alphabetical listing, to find the CAS number; the CAS number can be looked up in Part I to find the EPCRA section 313 listing name. For example, if the name known is Acetate Fast Orange R, this name can be found in Part II and the CAS number, 82-28-0, identified. This CAS number can be found in Part I with the listing name, 1-Amino-2-methyl anthraquinone.

The synonyms included in this glossary were identified from publicly available sources, including on-line databases. Please note that the glossary may not include names of all products currently in commerce, particularly mixtures, that may contain a section 313 chemical.
