

International Workshop on LCI-Quality 2003 Karlsruhe 20. - 21.10. 2003

USE OF LCI DATA IN THE CONSTRUCTION OF ECOLOGICAL INDICATORS FOR REGIONS

Sirkka Koskela, Jyri Seppälä, Matti Melanen and Marja-Riitta Hiltunen Finnish Environment Institute e-mail:sirkka.koskela@ymparisto.fi http://www.ymparisto.fi/eng/research/euproj/ecoreg/ecoreg.htm

CONTENTS OF THE PRESENTATION

- aims of the ECOREG project
- regional metabolism
- assessing ecological indicators
- LCI data in the regional environmental analysis
- data quality issues

ECOREG PROJECT

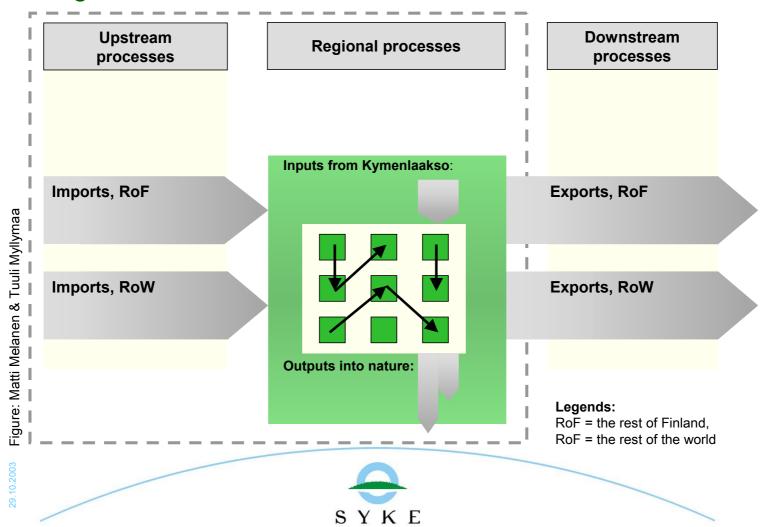

- "The Eco-efficiency of regions case Kymenlaakso"
- started in the autumn 2002, finished in the end of 2004

Main aims of the project:

- to demonstrate the concept of eco-efficiency and its practical implementation at the regional level by using the Finnish Kymenlaakso region as a case study
- ■to define economic, ecological and social & cultural indicators for assessing the development of regional ecoefficiency in general and especially in Kymenlaakso

Regional metabolism

Regional metabolism

Upstream processes

Angles:

- economic value
- environmental impacts (rough view)

Imports, RoF

- raw materials
- refined products

Imports, RoW

- raw materials
- refined products

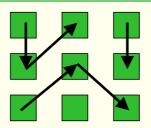

Regional processes

Angles:

- economic value (value added)
- environmental impacts (detailed view)
- social and cultural development

Inputs from Kymenlaakso:

- biomass
- soil
- minerals

Outputs into nature:

- · emissions into air
- · emissions into water
- · waste materials

Downstream processes

Angles:

• economic value

Exports, RoF

- raw materials
- refined products

Exports, RoW

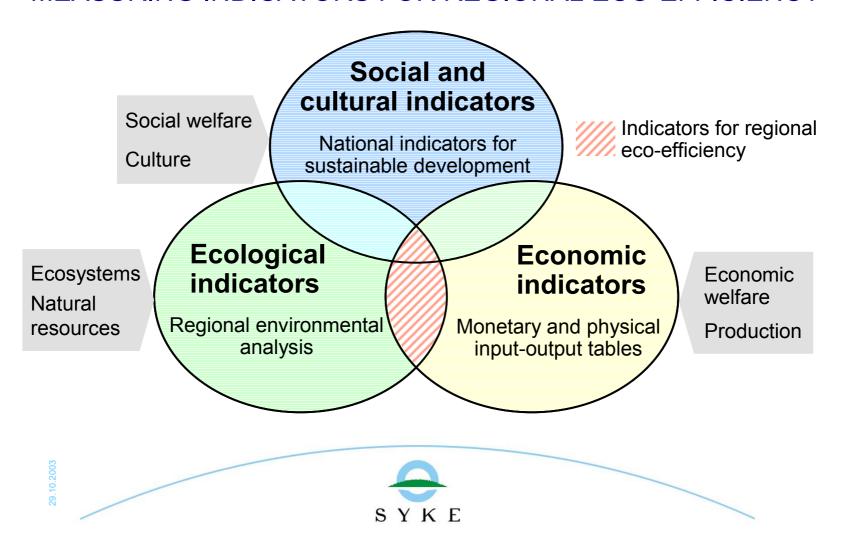

- · raw materials
- refined products

Legends:

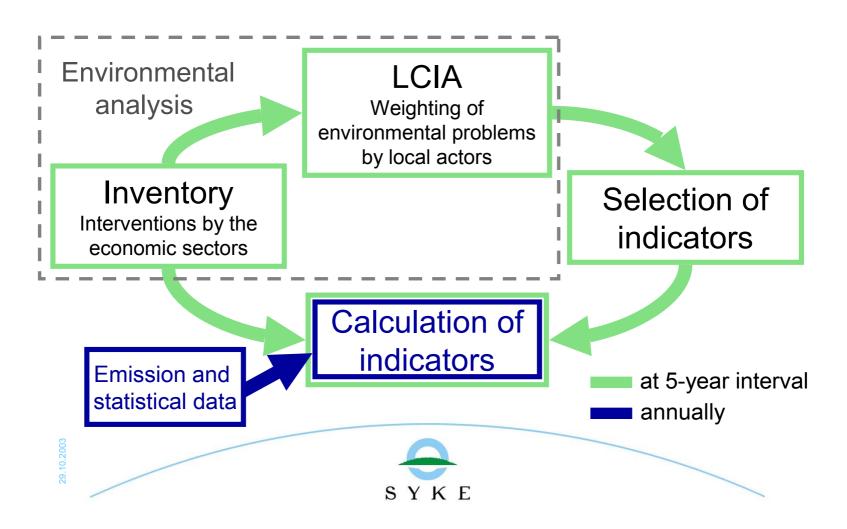

RoF = the rest of Finland, RoF = the rest of the world

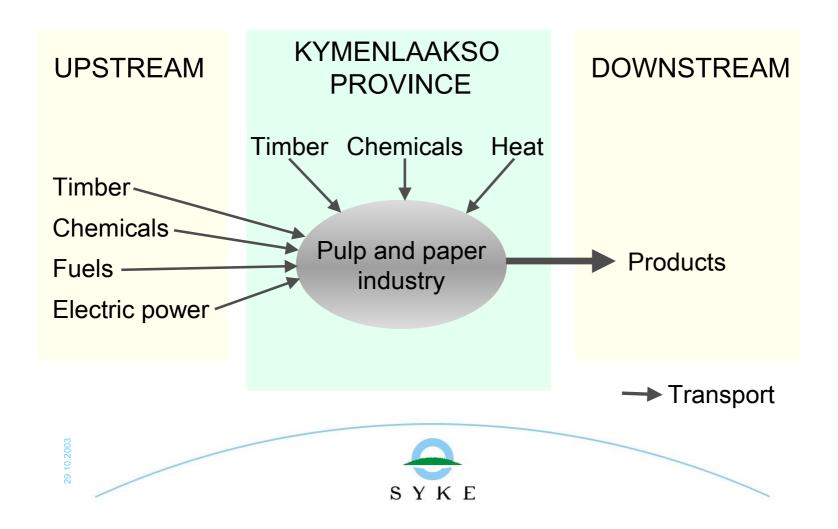

MEASURING INDICATORS FOR REGIONAL ECO-EFFICIENCY

ECOLOGICAL INDICATORS FOR REGIONS

AN EXAMPLE OF A PRODUCT CHAIN

LCI DATA IN THE ENVIRONMENTAL ANALYSIS

Regional processes

- data gathered per the total annual production volume of each economic sector: e.g., agriculture, forestry, industry, transportation, communities
- public statistics and databases maintained by environmental authorities
- site-specific and generic data

LCI DATA IN THE ENVIRONMENTAL ANALYSIS

Upstream processes

- Import: main products, raw materials or natural resources pertaining to economic sectors
- generic LCI data, diverse LCI databases
- Finnish average electricity model

DATA QUALITY ISSUES IN THE REGIONAL INVENTORY

- the data quality of the conventional emissions from point sources is good
- estimations of the emissions from diffuse sources, toxic pollutants and land use interventions include large uncertainties
- all regional LCI results will be verifiable and reproducible
- documentation will be transparent, updating the regional inventory will be possible

ISSUES TO BE STUDIED IN THE FUTURE

- available international databases
- data quality assessment

Thank you for your attention!
